## **DETAILED ACTION**

### ***Specification***

1. The amendment filed March 12, 2009 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: On page 3, the addition of "All of them have a low cut-off frequency, which implies ..." and "effect beyond the cut-off frequency" do not appear to be supported by the original specification.

Applicant is required to cancel the new matter in the reply to this Office Action.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3-6, 13, 14, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Goldbach et al. (US 4,822,011).

Goldbach et al. disclose a process to damp and filter the amplitude of mechanically-originated vibrations of a structure to be uncoupled, wherein an incident vibratory wave is filtered with damping by absorbing a filtered vibratory wave transmitted over a frequency and mechanical load amplitude that is applied to the structure; and a plurality of suspension assemblies (15) are all mounted in series between two elements of the structure with a damping

device (16) mounted in parallel to each suspension assembly of said plurality of suspension assemblies. (Figures 3-5)

4. Claims 1, 3-5, 13, 14, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Hawkins et al. (US 6,830,793).

Hawkins et al. disclose a process to damp and filter the amplitude of mechanically-originated vibrations of a structure to be uncoupled, wherein an incident vibratory wave is filtered with damping by absorbing a filtered vibratory wave transmitted over a frequency and mechanical load amplitude that is applied to the structure; and a plurality of suspension assemblies (18a, 18b) are all mounted in series between two elements of the structure with a damping device (16a, 16b) mounted in parallel to each suspension assembly of said plurality of suspension assemblies.

#### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1, 3-6, 13, 14, 16 and 17 have been considered but are moot in view of the new ground(s) of rejection.
